

News About The New **Geography Club**

Some of 5EV have started a new geography group, which you can find on our school website. To find the link, you go on the home page, click on information, and there is a section saying 'Geography'.

There are 4 different areas of facts, which include: Fun Facts, Geography in the news, Weird, Wonderful, Wild Weather and finally a quiz that you can take part in (and even win a prize of an atlas).

As our school is now an academy, we are hoping that in the future, Oldbury Wells School, will take part in it as well, and it would be nice to have them contributing with us.

The main focus of the geography group is to inform children about the world around them. We want people to be interested in the world around them and respect how important our world is; and how things like picking litter up and recycling can make a huge difference to our environment.

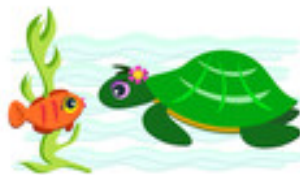

Mrs. Everington (the teacher who suggested the geography group idea) explained, “Geography is such a fantastic subject, and it’s brilliant that the children should be aware of our amazing world around them.”

Zach K mentions, “I like it, because I’m enthusiastic about Geography, and I like finding out facts about it.”

Molly says, “It’s a good idea, as people can improve on theirgeography knowledge and it’s good that there’s a question each month.”

Mr. Steele says, “Really good idea, because it’s not a sporty event, it’s something different as it’s another curriculum area.”

We wonder if you could answer our first month’s question: Warmer sea water off the Great Barrier Reef is having what effect on female turtles?
